

POWERLINK

POWERLINK PL-APN High Power 802.11bgn AP Router

## Quick Installation Guide

### Part I: External Installation Direction

#### Package Content

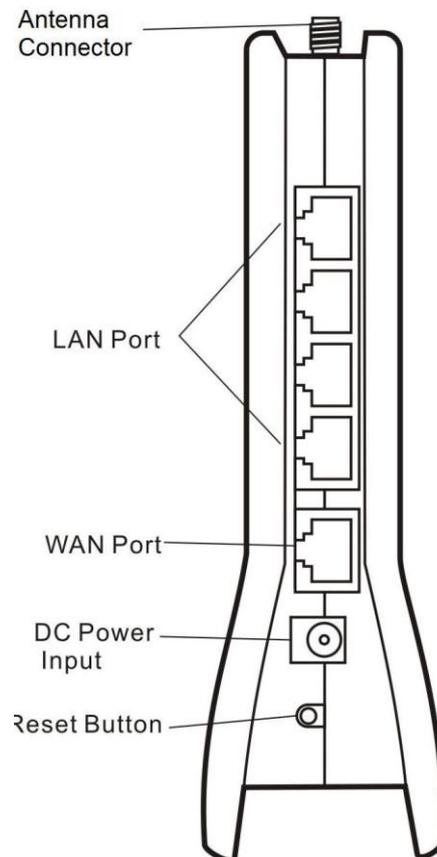

AP Router	1
DC 12V Power Adapter	1
Antenna	2
PoE DC Injector	1
Paper QIG	1
Manual/QIG CD	1

# POWERLINK

## POWERLINK PL-APN High Power 802.11bgn AP Router

### AP Router Connection

Before installing the router, connect your PC to the internet through your broadband service. (If there is any problem, contact your ISP.) Then proceed through the following steps.

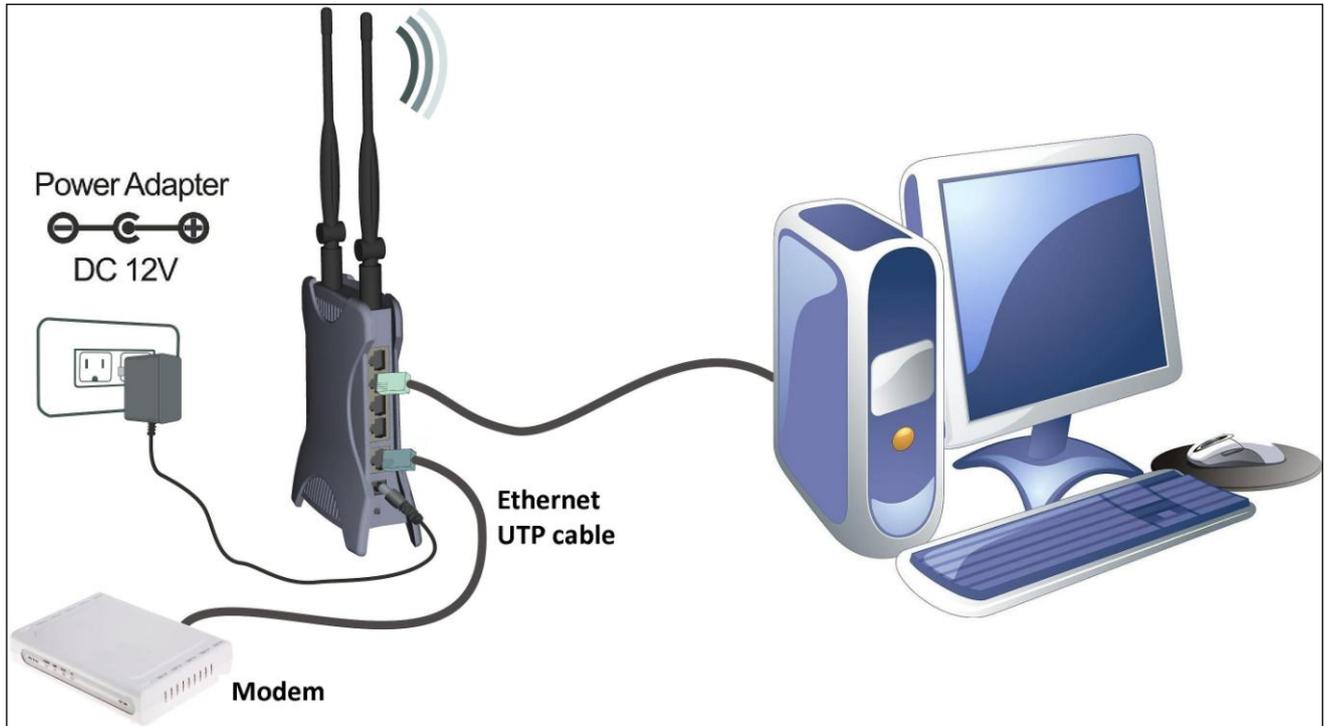

1. Turn off your PC(s), cable/ ADSL modem and the router.
2. Adjust the antenna if needed. Normally, straight up on router is good.
3. Connect the PC(s) and each switch/hub on your local area network to the LAN ports on the router.
4. Connect the ADSL/DSL/cable modem to the router WAN port.
5. Connect the power adapter between the DC-Jack on the router and an electrical outlet. The router will start to work automatically.

## POWERLINK

### POWERLINK PL-APN High Power 802.11bgn AP Router

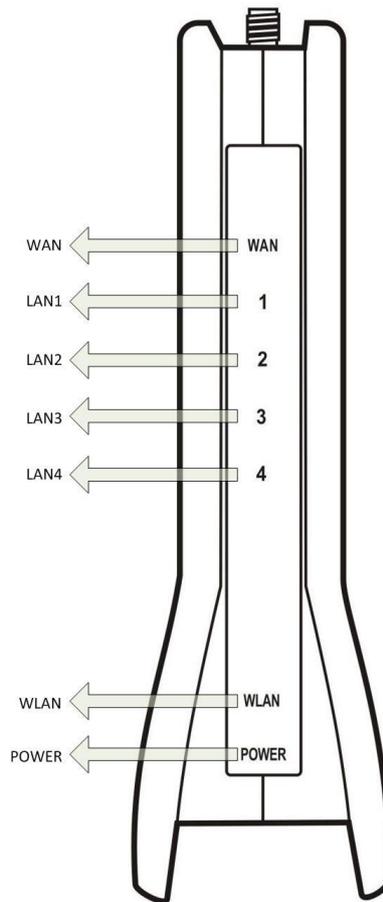

6. Turn on your PC(s) and the cable/ADSL modem.

## POWERLINK PL-APN High Power 802.11bgn AP Router

### AP Router configuration

The AP Router is delivered with the following factory default parameters on the Ethernet LAN interfaces.

Default IP Address: 192.168.1.254

Default IP subnet mask: 255.255.255.0

Web login User Name: <empty>

Web login Password: <empty>

The device has three operation modes (Gateway/Bridge/WISP).

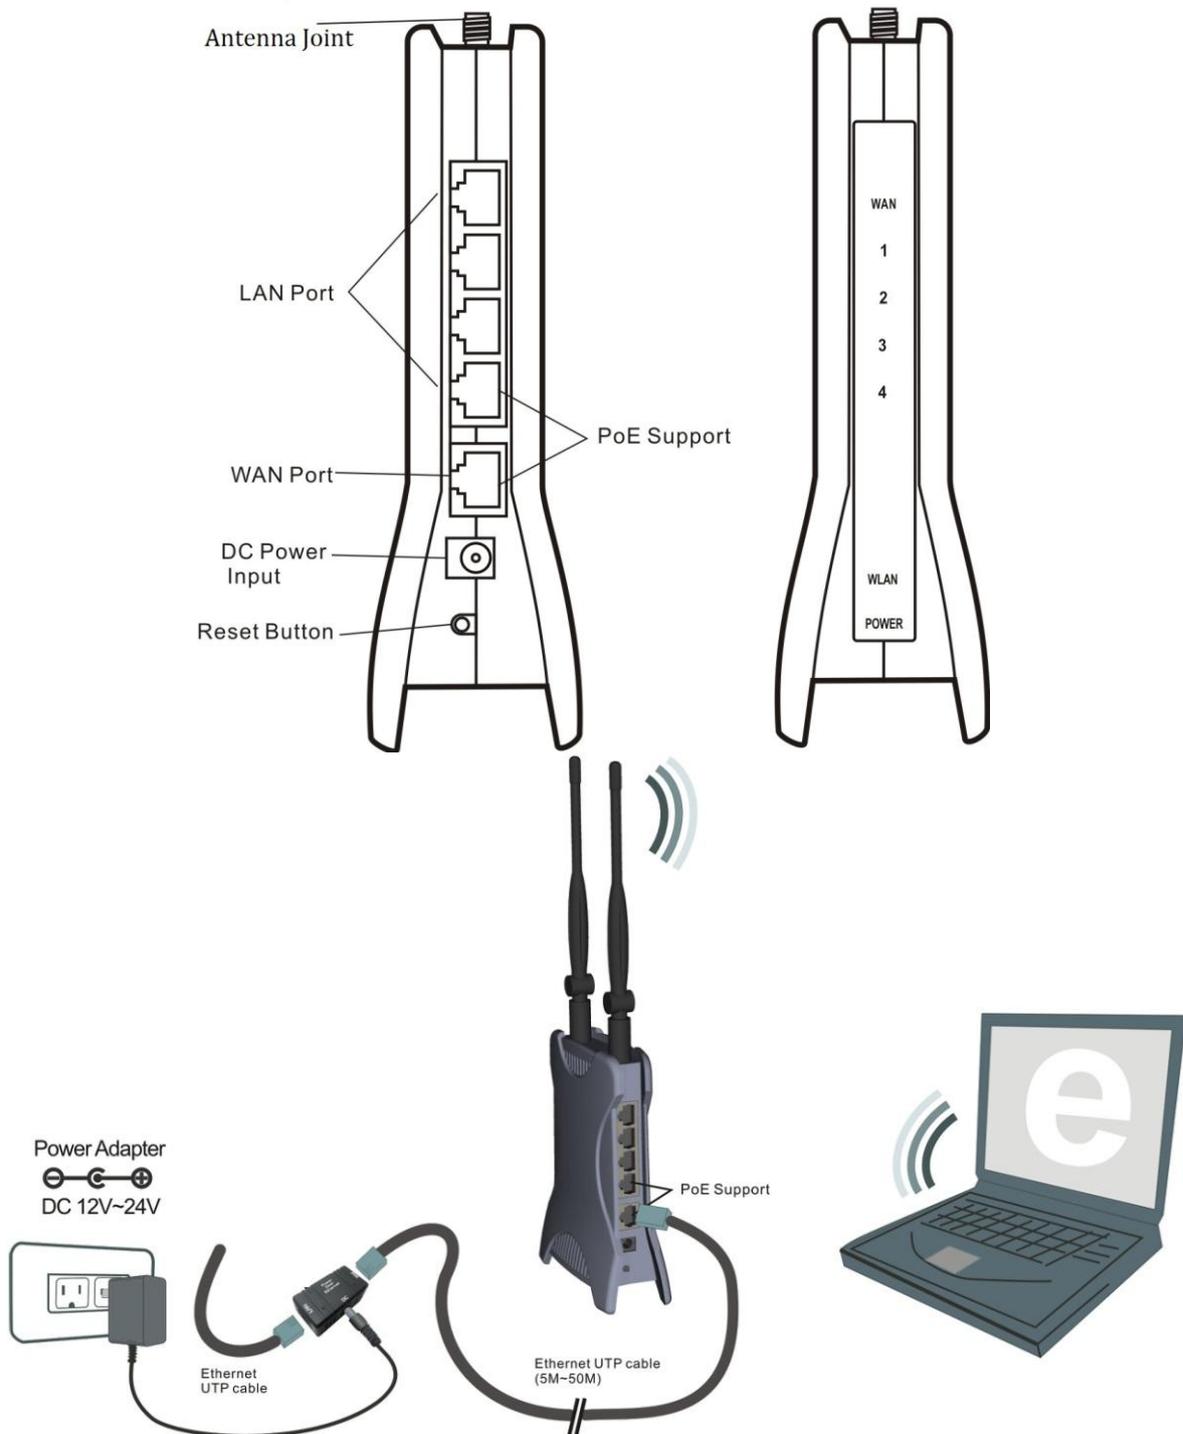

The default IP addresses for the device are 192.168.1.254, so you need to make sure the IP address of your PC is in the same subnet as the device, such as 192.168.1.X.

It will take about 55 seconds to complete the boot up sequence after power on.

# POWERLINK

## POWERLINK PL-APN High Power 802.11bgn AP Router

### PoE DC Injector Configuration

POE means Power over Ethernet, usually used with Wireless Device. You can use it to integrate the power and the Ethernet then connected with the RJ45 cable. With POE, you can bring the power and Ethernet with long distance as far as the length of RJ45 cable.

Since you used PoE DC Injector, the cable line won't perplex you anymore. Your Access Point & Router are installed conveniently to gain more efficient bandwidth by yourself.

**Less space and electricity limitation, more comfortable wireless life.**

## Part II: Internal Web Management

### AP Model Setup (ADSL)

1. Install the antenna & power adapter, and then connect the LAN cable with LAN port of this equipment. Another side of cable line connects with network card of computer. Waiting for booting around 20 seconds.
2. Open the IE ( Internet Explorer) and type 192.168.1.254 on Website to enter the setup frame. If you can't enter to setup frame, please press Reset button around 10 seconds to restore AP and try to enter again.

Select the Setup Wizard on the left side of setup frame and press **Next>>**

The screenshot displays the web management interface for a WLAN Broadband Router. The page title is "Broadband Router Status". A left-hand navigation menu is visible, with "Setup Wizard" highlighted in red. The main content area shows the current status and basic settings of the device.

This page shows the current status and some basic settings of the device.

System	
Uptime	0day:0h:32m:9s
Firmware Version	v1.4.2
Wireless Configuration	
Mode	AP
Band	2.4 GHz (B+G)
SSID	MyWLAN_BG
Channel Number	11
Encryption	Disabled
BSSID	00:e0:4c:d3:a1:8d
Associated Clients	0
TCP/IP Configuration	
Attain IP Protocol	Fixed IP

## Setup Wizard

The setup wizard will guide you to configure access point for first time. Please follow the setup wizard step by step.

**Welcome to Setup Wizard.**

**The Wizard will guide you the through following steps. Begin by clicking on Next.**

1. Setup Operation Mode
2. Choose your Time Zone
3. Setup LAN Interface
4. Setup WAN Interface
5. Wireless LAN Setting
6. Wireless Security Setting

Next>>

1. In Operation Mode, select Gateway and press **Next>>**

- Gateway:** In this mode, the device is supposed to connect to internet via ADSL/Cable Modem. The NAT is enabled and PCs in four LAN ports share the same IP to ISP through WAN port. The connection type can be setup in WAN page by using PPPOE, DHCP client, PPTP client or static IP.
- Bridge:** In this mode, all ethernet ports and wireless interface are bridged together and NAT function is disabled. All the WAN related function and firewall are not supported.
- Wireless ISP:** In this mode, all ethernet ports are bridged together and the wireless client will connect to ISP access point. The NAT is enabled and PCs in ethernet ports share the same IP to ISP through wireless LAN. You must set the wireless to client mode first and connect to the ISP AP in Site-Survey page. The connection type can be setup in WAN page by using PPPOE, DHCP client, PPTP client or static IP.
